

README

June 20, 2024

1 README

There are **three tasks** to work on. They are provided as **Jupyter Notebooks** and **PDFs** (PDFs do not include images!).

- `task1_multiomics`
- `task2_random-data_strange-predictions`
- `task3_feature-importance`

Instructions:

- Submit your answers as an **Jupyter Notebook** (make sure to rerun your whole notebook to make sure it executes).
- Python is preferred.
- Please structure and comment your code well.

1.1 Important

If you can not solve a task, or you are not sure whether your answer / approach is correct, don't worry:

1. Describe your current approach and why you took it in detail
2. Explain why it does not solve the task or what it lacks
3. Lay out a plan on how to solve the task, given more time or resources
